The Alaska Earthquake Information Center located a minor earthquake that occurred on Tuesday, June 21st at 1:17 PM AKDT in the Cook Inlet region of Alaska. This earthquake had a preliminary magnitude of 3.6 and was located at a depth of about 56 miles (89 km). The magnitude and location may change slightly as additional data are received and processed. No reports of this event being felt or causing damage have been received at this time.

The location and magnitude for this earthquake may be updated as data from additional seismic stations are received and processed. With any moderate or large earthquake, aftershocks should be expected to occur.
