The Alaska Earthquake Information Center (AEIC) monitors earthquakes in Alaska and provides earthquake information to the citizens and public officials of Alaska. The Center is a cooperative program of the Geophysical Institute of the University of Alaska and the U.S. Geological Survey and is located at the Geophysical Institute in Fairbanks with the Alaska State Seismologist’s Office.

The Alaska Earthquake Information Center located a light earthquake that occurred on Thursday, November 9th at 7:25 AM AKST in the central region of Alaska. This earthquake had a preliminary magnitude of 4.6 and was located at a depth of about 8 miles (14 km). The magnitude and location may change slightly as additional data are received and processed. No reports of this event being felt or causing damage have been received at this time.

Distance to nearby locations:

- 54 km (34 miles) WSW of Tanana
- 114 km (71 miles) ENE of Ruby
- 118 km (74 miles) W of Manley Hot Springs
- 128 km (80 miles) NNW of Lake Minchumina
- 129 km (81 miles) SSE of Hughes
- 150 km (94 miles) WSW of Rampart
- 171 km (107 miles) ESE of Huslia
- 176 km (110 miles) N of Telida

Preliminary earthquake parameters:

- Latitude: 64 N 59’
- Longitude: 153 W 08’
- Depth: 14 km
- Magnitude: ML 4.6

The location and magnitude for this earthquake may be updated as data from additional seismic stations are received. The Alaska Earthquake Information Center will continue to gather data and may issue additional releases as appropriate. With any moderate or large earthquake, aftershocks should be expected to occur.
